

Vigia

Run Business Central from your phone.

What it is for

Vigia shows the figures from your **Business Central** on your phone. Orders taken, revenue, margin, receivables and cash, for the whole group or company by company. The application reads Business Central live and **never writes anything to it**. Nothing to install on the phone: it opens in the browser and signs in with your Microsoft account. On the ERP side, a free extension, **Vigia Connector**, is installed once.

Three levels of reading

GROUP

The total across every company your rights let you see, with the comparison to budget and to last year.

COMPANY

The same screen for a single company, with its month by month trend.

CUSTOMER AND DOCUMENT

The breakdown by customer, by job or by salesperson, down to the open invoices.

The application, in six tabs

01 Summary	02 Orders	03 Revenue	04 Margin	05 Receivables	06 Cash
---------------	--------------	---------------	--------------	-------------------	------------

Every tab offers three references: the current year, the comparison to budget, the comparison to last year.

Getting started

- 1 Install Vigia Connector**
A free extension, installed once in Business Central from Microsoft Marketplace. Without it, no figure comes through.
- 2 Sign in**
Microsoft button. Vigia only reaches what your Business Central rights allow.
- 3 Pick the environment**
Production by default. The name can be changed in the settings.
- 4 Read the summary**
The four indicators on one screen, then the budget or last-year switch on each.
- 5 Drill into the detail**
Tap an indicator, then a line: company, customer, then invoice.
- 6 Add it to the home screen**
Vigia is an installable application: add it from the phone browser.

Good to know

- ◇ **Read-only.** Access relies on the D365 READ permission set. Business Central is never modified.
- ◇ **Your figures stay with you.** They come from your Business Central and go to your device, with no detour.
- ◇ **Local cache.** The data you viewed is kept on the device for instant display, and cleared on sign-out.
- ◇ **Local forecasts.** The dates and amounts entered in the cash tab stay on the device.
- ◇ **Ten languages.** French, English, Italian, German, Spanish, Portuguese, Dutch, Polish, Danish, Swedish.
- ◇ **Demonstration mode.** A sample dataset lets you see the application before connecting a tenant.
